## EDUCATION

**New York University** - MS in Computer Engineering CGPA - 3.7/4.0 **Sept 2022 - Aug 2024**

*Courses* : Computer Vision, Machine Learning, Deep Learning, Robot SLAM, ML in Cyber Security, Signal Processing *New York City, USA*

**Jadavpur University** - BE in Computer Science and Engineering - CGPA - 8.0 **Aug 2014 - May 2018**

*Courses* : DSA, Data Science, Natural Language Processing, Operating Systems, Computer Networks, Data Mining *Kolkata, India*

## WORK EXPERIENCE

**General Electric Healthcare** | Bangalore, India | **Senior Software Engineer** **July 2018 - August 2022**

- Simplified and centralised system interaction logging to improve system boot time by  $\approx 20\%$  and compile time improvement by  $\approx 30\%$  while working for ECG division of Diagnostic Cardiology team.
- Implemented security protocols for GDPR compliance of ECG firmware upgrade and improvement of data governance.
- Designed system to filter noise in ECG wave-forms reducing warm up time for signal capture by  $\approx 15\%$ .
- Prototyped AR software to assist paramedics and physicians with ECG lead placements.
- Setup infrastructure for offline support of critical features in app used field engineer using Chrome service workers
- Integrated a geolocation based inventory management and procure system for on location support of field engineers.
- Migrated Billing and Financial Engine from internal cloud infrastructure to AWS without affecting any product features.
- Created a tool for cost rollup for products belonging to all modalities, which improved cost tracking and reduced time spent by resource managers by  $\approx 30\%$  across all measured statistics.

**New York University** | Graduate Student Assistant **February 2023 - September 2024**

- Developed a foundation model using a modified SimCLR self-supervised learning framework, optimized for medical imaging datasets to improve lesion detection tasks across different modalities.
- Enhanced Biomedical Data Classification: Achieved a 5% improvement in diagnostic accuracy for biomedical histograms by incorporating information geometry and beta distributions, outperforming traditional classification methods.
- Optimized Feature Extraction Techniques: Demonstrated superior efficacy using high-dimensional foundational model feature space, compared to lower-dimensional beta representations, improving classification accuracy in lung nodule malignancy prediction and NSCLC prognostication.
- Utilized Riemannian Metric Spaces: Applied Fisher-Rao geometry to improve the consistency and interpretability of clustering and classification tasks, providing insights into the underlying data structure for medical datasets.
- Implemented Stability and Interpretability Measures: Employed saliency maps to identify biologically relevant regions, aligning model predictions with current tumor biology and enhancing the interpretability of prognostic outcomes.
- Explored Advanced Geometric Representations: Investigated the role of beta distributions and Riemannian metrics in modeling complex data structures, revealing a 5% increase in accuracy for clustering and classification tasks over Euclidean methods.
- Conducted Empirical Analysis Across Multiple Tasks: Validated model performance across three distinct tasks—lesion anatomical site classification, malignancy prediction, and NSCLC prognostication—highlighting the robustness of self-supervised foundational models in clinical applications.
- Contributed to Biomedical Research with Foundational Models: Built a comprehensive framework that integrates deep learning and geometric methods, demonstrating significant improvements in lesion detection, classification tasks, and patient prognosis modeling with fewer data samples.

**Samsung Research Institute** | Bangalore, India | **Software Engineering Intern** **May 2017 - July 2017**

- \* Designed and implemented a system for developers to export compatible Google web store apps to Tizen Web Ecosystem.
- \* Worked on json and manifest parsing along-with settings, privilege and certificate management for both the systems for fully functional integration from user perspective for a test set of around 100K apps.

## TECHNICAL SKILLS

**Languages:** Python, Java, C, C++, JavaScript, SQL, NoSQL, R, XML, HTML, CSS

**Technologies/Frameworks:** Kubernetes, Docker, Apache Storm, Flink, Druid, Apache Kafka, Airflow, Presto, Terraform, Hadoop, Ansible, AWS, Springboot, ReactJS, Redux, QT, AngularJS, NodeJS, PolymerJS, Git, MongoDB, PyTorch, Keras, TensorFlow, OpenCV, Objective-C, Xcode, PostgreSQL, AWS, Snowflake

## PROJECTS/ACHIEVEMENTS

- Designed a mouse pointer manipulation system guided by real time detection of hand gestures and fingers. Alternate Data for Micro-Forecasting for time series. Adversarial Attacks on Large Language Models. **Presentation — Video**
- Artistic Style Transfer Using Convolutional Neural Networks. **Seminar Slides — Abstract — Project Report**
- Implemented Neural Radiance Fields(NeRF) to create 3D representations to improve upon PixelNerf, RegNerf and SegNerf.

## RESEARCH INTERNSHIPS

---

**Jadavpur University** | Kolkata | Undergraduate Research Assistant

**May 2016 - July 2018**

- \* Music Emotion Recognition Tasks on MIREX, Sound Tracks and Media-Eval datasets through supervised machine learning models. Achieved an improvement of 6-10% in accuracy over the state-of-the-art methods.
- \* Devised a computer vision system based on optical flow tracking through video processing to classify crowd motion pattern.

**R.C. Bose Centre for Cryptology, ISI** | Kolkata | Undergraduate Summer Research Intern **May 2015 - July 2015**

- \* Formulated a distributed approach for batch wise GCD computation of RSA moduli to determine the biases in Randomness of Public Keys generated using RSA encryption scheme.
- \* Collected 42 million HTTPs public certificates from internet and found almost 0.4% sites vulnerable due to shared primes in RSA. Developed a fully parallel processing method for batch wise GCD Computation.
